GD

Hi everyone,

The scores are in from our healthcare data hackathon as part of out Data Science Bootcamp in Madrid and we have a clear winner!

Well done to Eric, Gretel, Polly, Roberto and Thomas! You had great business impact by presenting the financial implication of your predictions of who would be admitted to hospital and you showed technical strength through producing the best model. The best data science is when you can solve the right business problem in a technically robust way. Alex will be in touch about getting your amazon vouchers to you.

Thank you to everyone once more for being really engaged this week in Madrid. The standard was high. I hope you have made some new friends. Thank you again to the team that made this happen - especially Alex and Wouter.

The rest of the participants will of course want to know how your models did:

Group 4: 0.425
Group 5: 0.477
Group 2: 0.482
Group 3: 0.504
Group 1: 0.553

Regards,

Dr Damian Brennan
